PT AGRAPANA JAYA SENTOSA

COMPANY PROFILE

DIAMOND
COCONUT SUGAR

ABOUT US

Diamond Coconut Sugar firstly developed in 2018 under PT Agrapana Jaya Sentosa.
The high quality coconut sugar is manufactured in Yogyakarta, Java, Indonesia.

We are primarily focused on producing the best product with authentic taste, by implementing methods that is descended from generation to generation. Our organic brown sugar is produced naturally by passing through short chain process, therefore the essential nutrients are guaranteed.

Diamond Coconut Sugar has been part of Indonesia's culinary, especially for traditional sweeteners, as a subtitute for cane sugar that offers incredible delicious sweetness and is better for your health.

VISION

Becoming the largest and trustworthy coconut sugar manufacturer in Indonesia and overseas.

MISION

- Producing high quality product with authentic taste that fulfills international standard requirements
- Developing local commodity potentials to be more advanced and able to produce superior products.
- Focusing on the natural process and the impact of environment and social sustainability.

DIAMOND

- We offer flexible packaging solutions tailored to your specific requirements, including packaging size, material, design, and private label branding.

PRODUCTION PROCESS

DIAMOND

1.

Raw Material Receiviing

Brondol raw material is inspected for quality before acceptance.

2.

Boiling 70–80°C

Block sugar is dissolved at 70–80°C until completely mixed.

3.

Heating 115–135°C

The solution is heated to 115–135°C to achieve the desired concentration.

4.

Granulation

The liquid is transformed into granules using a granulator machine.

5.

Drying 60–70°C

Granules are dried at 60–70°C until the moisture content meets the standard.

6.

Magnet 12,000 gauss

The first magnetic separation removes ferromagnetic metal contaminants.

7.

Sieving (mesh 12, mesh 18)

Granules are sieved using mesh 12 and mesh 18 to ensure consistent size.

8.

Magnet 12,000 gauss

The second magnetic separation ensures no ferromagnetic contaminants remain.

9.

Filling

The product is temporarily stored in a hopper before the filling process.

10.

Weighing

The product is weighed according to the specified net weight.

11.

Packaging

Packaging is sealed tightly to maintain quality and prevent contamination.

12.

Packing

The product is packed in packaging that meets standards and is ready for distribution.

13.

Labeling / Stamping

The product is labeled with complete information including production date and expiration date.

14.

Horizontal Metal Detector

Final inspection using a horizontal metal detector before the next stage.

15.

Final Inspection

Products are checked again to ensure they meet the specified net weight and quality.

16.

Storage

Finished products are stored in a controlled warehouse.

17.

Distribution

Products are delivered to customers using clean and well-maintained vehicles.

18.

End

Products are delivered to customers and ready to be enjoyed.
